

x330 Series

Gigabit Layer 3 Access Switches

The Allied Telesis x330 Series Layer 3 Gigabit switches offer an impressive set of features in a compact fanless design, making them an ideal access solution for modern applications.

Overview

The Allied Telesis x330 Series provide an excellent access solution supporting Gigabit to the desktop for maximum performance. With Multi-Gigabit and 10 Gigabit copper and fiber uplinks, and a fanless design for silent operation, the x330 Series are ideal for the edge of business networks in the IoT era. With support for Layer 3 routing protocols, the x330 Series can also be deployed as distribution or small branch office core switches.

Manageable

The x330 Series run the advanced AlliedWare Plus™ fully featured operating system, delivering a rich feature set and an industry-standard Command Line Interface (CLI). This reduces training requirements and is consistent across all AlliedWare Plus devices, simplifying management.

The web-based Graphical User Interface (GUI) is an easy-to-use and powerful management tool, with comprehensive monitoring facilities.

Network Management

Vista Manager™ EX bundled with Allied Telesis Autonomous Management Framework™ Plus (AMF Plus) meets the increasing management requirements of modern networks. While AMF Plus allows an entire network to be securely and easily managed as a single virtual device, Vista Manager EX provides an intuitive and powerful graphical tool for monitoring and managing AMF Plus wired, Autonomous Wave Control (AWC) wireless, and third party (SNMP) devices.

Cybersecurity

The x330 Series acting as AMF Plus members are compatible with our AMF-Security solution, which enables a self-defending network. The AMF-Sec controller responds immediately to any internal malware threats by instructing the x330 Series to isolate the affected

part of the network, and quarantine the suspect device. Vista Manager EX alerts networks administrators of threats that have been dealt with.

Network protection

Advanced storm protection features include bandwidth limiting, policy-based storm protection and packet storm protection.

Network storms are often caused by cabling errors that result in a network loop. The x330 Series provide features to detect loops as soon as they are created. Loop detection and thrash limiting take immediate action to prevent network storms.

Secure

Network security is guaranteed, with powerful control over network traffic types, secure management options, and other multi-layered security features built right in.

Network Access Control (NAC) gives unprecedented control over user access to the network, in order to mitigate threats to network infrastructure.

Allied Telesis x330 switches use 802.1x port-based authentication, in partnership with standards-compliant dynamic VLAN assignment, to assess a user's adherence to network security policies and either grant access or offer remediation. Tri-authentication ensures the network is only accessed by known users and devices. Secure access is also available for guests.

Security from malicious network attacks is provided by a comprehensive range of features such as DHCP snooping, STP root guard, BPDU protection and access control lists. Each of these can be configured to perform a variety of actions upon detection of a suspected attack.

Resilient

Allied Telesis Ethernet Protection Switched Ring (EPSRing™), and the standards-based G.8032 Ethernet

Ring Protection, ensure that distributed network segments have high-speed, resilient access to online resources and applications.

Future-proof

The x330 Series are Software Defined Networking (SDN) ready and able to support OpenFlow v1.3.

ECO friendly

The x330 Series support Energy Efficient Ethernet, which automatically reduces the power consumed by the switch whenever there is no traffic on a port.

The x330 Series are fanless, providing silent operation, which makes them ideal for desktop or work area deployment.

Key Features

- ► AlliedWare Plus Enterprise-class operating system
- ► Allied Telesis Autonomous Management Framework™ Plus (AMF Plus)
- ▶ Vista Manager EX compatible
- ► AMF-Security compatible
- ▶ 10G copper and fiber uplinks
- ► Multi-Gigabit (1/2.5/5/10G) port for flexible uplink options
- ► EPSRingTM and G.8032 for resilient rings
- ► EPSR Master
- ► Energy Efficient Ethernet saves
- Upstream Forwarding Only (UFO)
- ► Active Fiber Monitoring
- ► Static and dynamic routing
- ► Fanless design for silent operation
- ▶ Web-based Device GUI
- ► Multicast Source Discovery Protocol (MSDP)
- Link Monitoring

Key Features

Allied Telesis Autonomous Management Framework™ Plus (AMF Plus)

- ▶ AMF Plus is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- ▶ From AW+ 5.5.2-2 onwards, an AMF Plus license operating in the network provides all standard AMF network management and automation features, and also enables the AMF Plus intentbased networking features menu in Vista Manager EX (from version 3.10.1 onwards).

Virtual Chassis Stacking (VCStack™)

➤ The x330-20GTX and x330-28GTX can form a VCStack of up to six switches, with 40 Gbps of stacking bandwidth. VCStack provides a highly-available system in which network resources are spread out across stacked units, minimizing the impact should any unit fail.

Ethernet Protection Switched Ring (EPSRing™)

- EPSRing allows several x330 switches to join a protected ring capable of recovery within as little as 50ms. This feature is perfect for high availability in enterprise networks.
- ➤ The x330 Series can act as the ESPR Master, or be deployed as an EPSR transit node.

G.8032 Ethernet Ring Protection

G.8032 provides standards-based high-speed ring protection, that can be deployed stand-alone, or interoperate with Allied Telesis EPSR. Ethernet Connectivity Fault Monitoring (CFM) proactively monitors links and VLANs, and provides alerts when a fault is detected.

Access Control Lists (ACLs)

➤ The x330 Series feature industry-standard access control functionality through ACLs. ACLs filter network traffic to control whether packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way. An example of this would be to provide traffic flow control.

VLAN ACLs

Simplify access and traffic control across entire segments of the network. Access Control Lists (ACLs) can be applied to a Virtual LAN (VLAN) as well as a specific port.

Upstream Forwarding Only (UFO)

 UFO lets you manage which ports in a VLAN can communicate with each other, and which only have upstream access to services, for secure multi-user deployment.

Easy To Manage

► The AlliedWare Plus operating system incorporates an industry standard CLI, facilitating intuitive manageability.

- With three distinct modes, the CLI is very secure, and the use of SSHv2 encrypted and strongly authenticated remote login sessions ensures CLI access is not compromised.
- As a Layer 3 switch, a static route can be added to allow a user in a different subnet to manage the switch.
- The Device GUI enables graphical monitoring and management of the switch, simplifying administration

Open Shortest Path First (OSPFv2,OSPFv3)

 OSPF is a scalable and adaptive routing protocol for IP networks. The addition of OSPFv3 provides support for IPv6 and further strength for next generation networking.

Storm protection

- Advanced packet storm control features protect the network from broadcast storms: Bandwidth limiting minimizes the effects of the storm by reducing the amount of flooding traffic.
- ▶ Policy-based storm protection is more powerful than bandwidth limiting. It restricts storm damage to within the storming VLAN, and it provides the flexibility to define the traffic rate that creates a broadcast storm. The action the device should take when it detects a storm can be configured, such as disabling the port from the VLAN or shutting the port down.
- Packet storm protection allows limits to be set on the broadcast reception rate, multicast frames and destination lookup failures. In addition, separate limits can be set to specify when the device will discard each of the different packet types.

sFlow

sFlow is an industry-standard technology for monitoring high-speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure a real-time view of network traffic.

Loop protection

- ▶ Thrash limiting, also known as Rapid MAC movement, detects and resolves network loops. It is highly user-configurable — from the rate of looping traffic to the type of action the switch should take when it detects a loop.
- ▶ With thrash limiting, the switch only detects a loop when a storm has occurred, which can potentially cause disruption to the network. To avoid this, loop detection works in conjunction with thrash limiting to send special packets, called Loop Detection Frames (LDF), that the switch listens for. If a port receives an LDF packet, one can choose to disable the port, disable the link, or send an SNMP trap.

Tri-authentication

➤ Authentication options on the x330 Series include alternatives to 802.1x port-based authentication, such as web authentication, to enable guest access and MAC authentication for end points that do not have an 802.1x supplicant. All three authentication methods—802.1x, MAC-based and Web-based—can be enabled simultaneously on the same port, resulting in tri-authentication.

TACACS+ Command Authorization

TACACS+ Command Authorization offers centralized control over which commands may be issued by each specific AlliedWare Plus device user. It complements authentication and accounting services for a complete AAA solution.

Premium Software License

▶ By default, the x330 Series offer a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be elevated to full Layer 3 by applying the premium software license. This adds dynamic routing protocols and Layer 3 multicasting capabilities.

Unidirectional Link Detection

Unidirectional Link Detection (UDLD) is useful for monitoring fiber-optic links between two switches that use two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

Active Fiber Monitoring

Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

Multicast Source Discovery Protocol (MSDP)

 MSDP enables two or more PIM-SM (Sparse Mode) domains to share information on active multicast sources, for more efficient forwarding of multicast traffic.

Link Monitoring (Linkmon)

▶ Linkmon enables network health monitoring by regularly sending probes over key links to gather metrics comprising latency, jitter, and probe loss. This supports pro-active network management, and can also be used with triggers to automate a change to device or network configuration in response to the declining health of a monitored link.

VLAN Translation

- VLAN Translation allows traffic arriving on a VLAN to be mapped to a different VLAN on the outgoing interface.
- Service Providers can provide customers with a unique VLAN ID, which can be changed for data transfer through the SP's network.
- In the Enterprise, it can be used to merge two networks together, without manually reconfiguring the VLAN numbering scheme.

Key Solutions

Resilient small network core

The x330-20GTX and x330-28GTX can form a VCStack of up to 6 switches to provide load-sharing and network redundancy for flexible deployment. With the addition of dynamic routing and multicasting capability, the x330-20GTX and x330-28GTX are ideal as a resilient small network core solution.

The x330 series support EPSR master capability with no feature license required. With EPSRing, the x330 series can deliver high-performance resilient ring connectivity with automatic recovery in as little as 50ms.

Flexible deployment

The fanless and compact design of the x330-10GTX makes it ideal for use in office spaces where quiet operation is required. Advanced network control features ensure secure always-on access to online resources and applications.

10 Gigabit uplinks from the x330-10GTX edge switches provides maximum throughput, and business buildings can be connected with secure 10G WAN connectivity for high performance. The flexible x330 series are capable of connecting at 2.5G and 5G Multi-Gigabit speeds, which enables fully flexible deployment that maximizes network and building infrastructure.

NETWORK SMARTER x330 Series | 3

x330 Series | Gigabit Layer 3 Access Switches

Specifications

Performance

- Supports 10KB L2 jumbo frames for 2.5G connections, or 12KB for all other connection speeds
- ► Wire speed multicasting
- ► 4094 configurable VLANs
- ▶ 16K MAC addresses
- ▶ 1GB DDR3 SDRAM, 256MB NAND flash memory
- ► Packet buffer memory: 2MB

Reliability

- ▶ Modular AlliedWare Plus operating system
- ▶ Temperature and internal voltages. SNMP traps alert network managers in case of any failure

Expandability

- Create a VCStack of up to six x330-20GTX and x330-28GTX switches
- ▶ Versatile licensing options for additional features

Flexibility and Compatibility

- ▶ 10G SFP+ ports will support any combination of Allied Telesis 1000Mbps SFP and 10GbE SFP+ modules and direct attach cables listed in this document under Ordering Information
- ➤ The 1/2.5/5/10G Multi-Gigabit port enables flexible uplink options, and support for legacy cabling
- Port speed and duplex configuration can be set manually or by auto-negotiation
- ► Front-panel SFP+ stacking ports can be configured as 1G/10G Ethernet ports

Diagnostic Tools

- ► Connectivity Fault Management (CFM) Continuity Check Protocol (CCP) for use with G.8032 ERPS
- ► Built-In Self Test (BIST)
- ► Ping polling and traceroute for IPv4 and IPv6
- ► Optical Digital Diagnostic Monitoring (DDM)
- ► Find-me device locator
- ► Automatic link flap detection and port shutdown
- ► Cable fault locator (TDR)
- ► Uni-Directional Link Detection (UDLD)
- Active Fiber Monitoring detects tampering on optical links

IPv4 Features

- ► Equal Cost Multi Path (ECMP) routing
- Static unicast and multicast routing for IPv4
- ► UDP broadcast helper (IP helper)
- ▶ Directed broadcast forwarding
- ▶ Black hole routing
- DNS relay
- ► Route redistribution (OSPF and RIP)
- Policy-based routing

IPv6 Features

- ▶ Device management over IPv6 networks with
- SNMPv6, Telnetv6 and SSHv6
- ► IPv4 and IPv6 dual stack
- ► Log to IPv6 hosts with Syslog v6

- NTPv6 client and server
- ► DNSv6 client, DNSv6 relay
- DHCPv6 client and relay
- ► Static IPv6 unicast and multicast routing
- IPv6 aware storm protection and QoS
- ► IPv6 hardware ACLs

Management

- ► Industry-standard CLI with context-sensitive help
- Built-in text editor and powerful CLI scripting engine
- Comprehensive SNMP MIB support for standardsbased device management
- Console management port on the front panel for ease of access
- Event-based triggers allow user-defined scripts to be executed upon selected system events
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices
- Front panel 7-segment LED provides at-a-glance status and fault information
- ► Web-based Graphical User Interface (GUI)
- Allied Telesis Autonomous Management Framework Plus (AMF Plus) enables powerful centralized management and zero-touch device installation and recovery.

Quality of Service

- ► IP precedence and DiffServ marking based on Layer 2, 3 and 4 headers
- Queue scheduling options for strict priority, weighted round robin or mixed scheduling
- ► Taildrop for queue congestion control
- ► Extensive remarking capabilities
- Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- ► Type of Services (ToS) IP precedence and DiffServ marking based on layer 2, 3 and 4 headers
- Limit bandwidth per port or per traffic class down to 64khps
- 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- ► Policy-based storm protection
- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications

Resiliency Features

- ► EPSRing (Ethernet Protection Switched Rings) with Super Loop Protection (SLP) and enhanced recovery
- ▶ STP root guard
- ► Loop protection: thrash limiting and loop detection
- ► Dynamic link failover (host attach)
- Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ► PVST+ compatibility mode
- ▶ BPDU forwarding
- VCStack fast failover minimizes network disruption
- SFP+ stacking ports can be configured as 10G Ethernet ports

Security Features

- MAC address filtering and MAC address lockdown
- ► Port-based learn limits (intrusion detection)
- Access Control Lists (ACLs) based on layer 3 and 4 headers
- Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ► Secure Copy (SCP)
- ▶ BPDU protection
- Network Access and Control (NAC) features manage endpoint security
- Dynamic VLAN assignment
- ► Tri-authentication: MAC-based, web-based and IEEE 802.1x
- ▶ DoS attack blocking and virus throttling
- ► DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- Strong password security and encryption
- ► Auth fail and guest VLANs
- ► Secure File Transfer Protocol (SFTP) client
- Authentication, Authorisation and Accounting
 (ΔΔΔ)
- Bootloader can be password protected for device security
- ► Configurable ACLs for management traffic
- ► RADIUS group selection per VLAN or port

Environmental Specifications

- Operating temperature range: 0°C to 50°C (32°F to 122°F)
- ► Storage temperature range: -25°C to 70°C (-13°F to 158°F)
- ► Operating relative humidity range: 5% to 90% non-condensing
- Storage relative humidity range: 5% to 95% non-condensing
- Operating altitude: 3,048 meters maximum (10,000 ft)

Software Defined Networking (SDN)

 OpenFlow v1.3 with support for encryption, connection interruption and inactivity probe

Electrical Approvals and Compliances

- ► EMC: EN55032 class A, FCC class A, VCCI class A, ICES-003 class A
- ► Immunity: EN55035, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) AC models only

_ . .

- Standards: UL62368-1, CAN/CSA-C22.2
 No.62368-1, EN62368-1, EN60825-1, AS/N7S62368 1
- ► Certification: UL, cUL

Restrictions on Hazardous Substances (RoHS) Compliance

- ► EU RoHS compliant
- ► China RoHS compliant

NAME	DESCRIPTION	INCLUDES	STACK LICENSING
AT-FL-x330-01	x330 Premium license	 ▶ OSPF¹ (256 routes) ▶ PIMv4-SM, DM and SSM v4 ▶ RIPng² (256 routes) ▶ OSPFv3² (256 routes) ▶ PIM-SMv6/SSMv6 ▶ MLD v1/v2 ▶ VLAN double tagging (Q-in-Q) ▶ VLAN translation 	▶ One license per stack member
AT-FL-x330-8032	ITU-T G.8032 license	G.8032 ring protection Ethernet CFM	► One license per stack
AT-FL-x330-0F13-1YR	OpenFlow license	► OpenFlow v1.3 for 1 year	Not supported on a stack
AT-FL-x330-0F13-5YR	OpenFlow license	► OpenFlow v1.3 for 5 years	Not supported on a stack

¹ The standard switch software supports 1,000 IPv4 Static, 256 RIP, and 64 OSPF routes

Ordering Information

Model availability can vary between regions. Please check to see which models are available in your region.

AT-x330-10GTX-xx

8-port 10/100/1000T switch, with 1 x 1/2.5/5/10G copper port, 1 x SFP/SFP+ port, and 1 fixed PSII

AT-x330-20GTX-xx

16-port 10/100/1000T switch, with 2 x 1/2.5/5/10G copper ports, 2 x SFP/SFP+ ports, and1 fixed PSU

AT-x330-28GTX-xx

24-port 10/100/1000T switch, with 2 x 1/2.5/5/10G copper ports, 2 x SFP/SFP+ ports, and 1 fixed PSU

AT-RKMT-J05

Rack Mount Tray for x330-10GTX

AT-RKMT-J13

Rack Mount Kit for x330-20GTX and x330-28GTX

AT-BRKT-J23

Wall mount kit for x330-10GTX

AT-BRKT-J24

Wall mount kit for x330-20GTX and x330-28GTX

AT-VT-Kit3

Management Cable (USB to Serial Console)

AT-STND-J03

Stand-kit for AT-x330-28GTX

Where x = 10 for US power cord 30 for UK power cord 40 for Australian power cord 50 for European power cord

³ Trade Act Agreement compliant

10G SFP+ Modules

Any 10G SFP+ module or cable can be used for stacking with the front panel 10G ports

AT-SP10SR

10GSR 850 nm short-haul, 300 m with MMF

AT-SP10SR/I

10GSR 850 nm short-haul, 300 m with MMF industrial temperature

AT-SP10LR20/I

10GER 1310 nm long-haul, 20 km with SMF industrial temperature

AT-SP10TM

1G/2.5G/5G/10G, 100m copper, TAA3

AT-SP10BD10/I-12

10 GbE Bi-Di (1270 nm Tx, 1330 nm Rx) fiber up to 10 km industrial temperature, TAA^3

AT-SP10BD10/I-13

10 GbE Bi-Di (1330 nm Tx, 1270 nm Rx) fiber up to 10 km industrial temperature, TAA^3

AT-SP10BD20-12

10 GbE Bi-Di (1270 nm Tx, 1330 nm Rx) fiber up to 20 km, $TAA^{\scriptscriptstyle 3}$

AT-SP10BD20-13

10 GbE Bi-Di (1330 nm Tx, 1270 nm Rx) fiber up to 20 km, TAA $^{\rm 3}$

AT-SP10TW1

1 meter SFP+ direct attach cable

AT-SP10TW3

3 meter SFP+ direct attach cable

1000Mbps SFP Modules

AT-SPSX

1000SX GbE multi-mode 850 nm fiber up to 550 m

AT-SPEX

1000X GbE multi-mode 1310 nm fiber up to 2 km

AT-SPLX10a

1000LX GbE single-mode 1310 nm fiber up to 10 km

AT-SPLX10/I

1000LX GbE single-mode 1310 nm fiber up to 10 km, industrial temperature

AT-SPBD10-13

1000LX (LC) GbE Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 10 km

AT-SPBD10-14

1000LX (LC) GbE Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 10 km

AT-SPBD20-13/I

1000BX GbE Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 20 km $\,$

AT-SPBD20-14/I

1000BX GbE Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 20 km

AT-SPBD40-13/I

1000LX (LC) GbE single-mode Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 40 km, industrial temperature

AT-SPBD40-14/I

1000LX (LC) GbE single-mode Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 40 km, industrial temperature

AT-SPLX40

1000LX GbE single-mode 1310 nm fiber up to 40 km

AT-SPTX

10/100/1000 TX (RJ45), up to 100 m

² The standard switch software supports 1,000 IPv6 Static, and no RIPng or OSPFv3 routes
